

SYED ASAR AMAN

Software Engineer

<https://github.com/AsarAman> | +923169920767 | asaraman278@gmail.com

SKILLS:

Languages: C, C++, JavaScript, Python, SQL, PHP

Frameworks: ReactJS, NextJS, Django, NodeJS, ExpressJS

Databases & Platforms: MongoDB, SQL, MySQL, Pandas, Numpy, PyCharm, Jupyter Notebook, Visual Studio Code, Inteli IDE

WORK EXPERIENCE:

IPlexSoft (Peshawar - Pakistan)

Full Stack Software Engineer | March 2024 - Present

- Led development and launch of 5+ production features, improving overall product engagement and platform capability.
- Improved backend processing efficiency by 40% through database query optimization and better service architecture.
- Reduced production incidents by 30% by implementing improved monitoring, logging, and proactive system checks.
- Streamlined deployment workflows, enabling 50% faster release cycles and more reliable feature rollouts.
- Designed backend components supporting 10k+ monthly active users, ensuring high availability and consistent performance.
- Collaborated with cross-functional teams to deliver scalable solutions, contributing to 20% growth in platform usage.
- Implemented horizontal scaling to handle 4x peak traffic while maintaining 99.97% uptime.

CodeCue (Haripur - Pakistan)

Software Engineer | January 2023 - February 2024

- Built and maintained web server components and APIs, enabling reliable feature delivery.
- Designed and managed CI/CD pipelines to handle releases, reducing manual effort by 20 hours/week and improving deployment consistency.
- Fixed 15 major bugs over 8 months, strengthening quality and lowering defects.
- Delivered features with 0 post-release bugs, increasing usage by over 23%.
- Optimized API performance through caching and parallel processing, reducing latency from 350ms to 120ms (66% improvement).

PROJECTS:

Image Processing Web Application (<https://github.com/AsarAman/asar-image-edit>) :

- Developed a web application that automatically enhances and repairs images using AI-based processing techniques.
- Implemented backend APIs for image upload, processing, and download, enabling fast and reliable image transformation.
- Designed an intuitive UI allowing users to upload, preview, and download enhanced images within seconds.
- Optimized image processing workflows to reduce average processing time and improve overall performance.
- Integrated secure file handling and storage to manage user uploads efficiently.

Old Photo Restoration (<https://github.com/AsarAman/photo-restore>) :

- Developed a web application that automatically enhances and repairs images using AI-based processing techniques.
- Implemented backend APIs for image upload, processing, and download, enabling fast and reliable image transformation.
- Designed an intuitive UI allowing users to upload, preview, and download enhanced images within seconds.
- Optimized image processing workflows to reduce average processing time and improve overall performance.
- Integrated secure file handling and storage to manage user uploads efficiently.

EDUCATION:

University of Haripur (Pakistan) | 2020 - 2024

Bachelor of Science - Software Engineering

CERTIFICATES:

Programming in Python (Meta) | Introduction to Data Analyst (IBM) | Foundations: Data, Data, Everywhere (Google)
